Introduction to Bioinformatics

Introducing the *what, why and how* of bioinformatics?

Bioinformatics Database

Hands-on exploration of several major databases and their associated tools.

<http://thegrantlab.org/bggn213/>

The screenshot shows a web browser window displaying the course website. The URL in the address bar is bioboot.github.io/bggn213_S18/. The page title is "Bioinformatics (BGGN 213, Spring 2018)". On the left, there is a sidebar with the UC San Diego logo and the course name "BGGN 213". Below the course name, a description states: "A hands-on introduction to the computer-based analysis of genomic and biomolecular data from the Division of Biological Sciences, UCSD". A list of navigation links includes: Overview, Lectures, Computer Setup, Learning Goals, Assignments & Grading, and Ethics Code. At the bottom of the sidebar are social media icons for Twitter, GitHub, Email, and RSS. The main content area features sections for Course Director (Prof. Barry J. Grant, email: bjgrant@ucsd.edu), Instructional Assistant (Yuansheng Zhou, email: yuz461@ucsd.edu), and Course Syllabus (Spring 2018 (PDF)). To the right of the syllabus link is a cartoon DNA helix icon with a magnifying glass focusing on the sequence "101 110". The "Overview" section defines Bioinformatics as the application of computational and analytical methods to biological problems, describing it as a rapidly maturing field driving data collection, analysis, and interpretation. It also states that the course is designed for bioscience graduate students.

Overview

Bioinformatics - the application of computational and analytical methods to biological problems - is a rapidly maturing field that is driving the collection, analysis, and interpretation of the avalanche of data in modern life sciences and medical research.

This course is designed for bioscience graduate students and provides a hands-on introduction to the computer-based analysis of genomic and biomolecular data.

What essential concepts and skills should YOU attain from this course?

The screenshot shows a web browser window with the URL bioboot.github.io/bggm213_f17/goals/. The page is titled "Learning Goals". On the left, there is a sidebar for the course BGGN 213, which includes links for Overview, Lectures, Computer Setup, Learning Goals (which is highlighted with a red box), Assignments & Grading, Ethics Code, and Screen Cast Videos. Below the sidebar, there are social media icons for Twitter, GitHub, and RSS feed.

Learning Goals

At the end of this course students will:

- Understand the increasing necessity for computation in modern life sciences research.
- Be able to use and evaluate online bioinformatics resources including major biomolecular and genomic databases, search and analysis tools, genome browsers, structure viewers, and select quality control and analysis tools to solve problems in the biological sciences.
- Be able to use the UNIX command line and the R environment to analyze bioinformatics data at scale.
- Understand the process by which genomes are currently sequenced and the bioinformatics processing and analysis required for their interpretation.
- Be familiar with the research objectives of the bioinformatics related sub-disciplines of Genomics, Transcriptomics and Structural bioinformatics.

In short, students will develop a solid foundational knowledge of bioinformatics and be able to evaluate new biomolecular and genomic information using existing bioinformatic tools and resources.

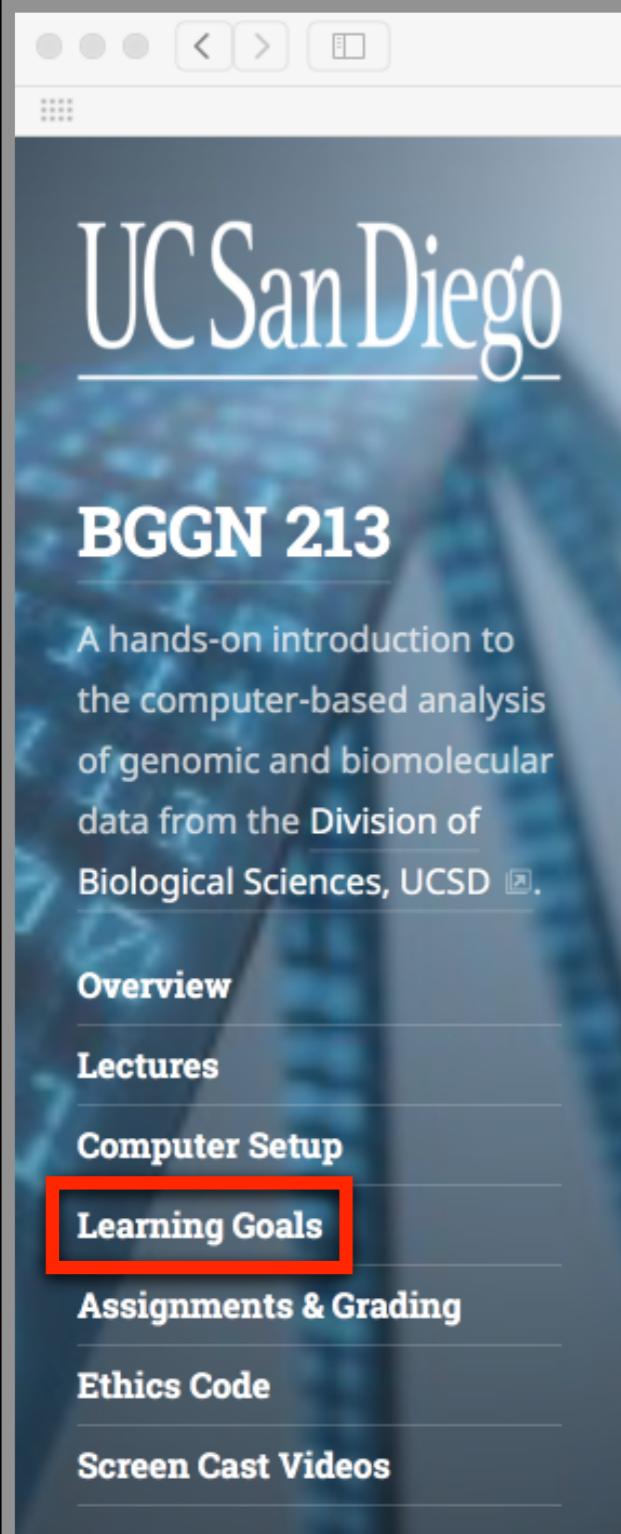

At the end of this course students will:

- Understand the increasing necessity for computation in modern life sciences research.
- Be able to use and evaluate online bioinformatics resources and analysis tools to solve problems in the biological sciences.
- Be able to use the R environment to analyze bioinformatics data at scale.
- Be familiar with the research objectives of the bioinformatics related sub-disciplines of Genome informatics, Transcriptomics and Structural informatics.

In short, you will develop a solid foundational knowledge of **bioinformatics** and be able to evaluate new biomolecular and genomic information using **existing bioinformatic tools and resources.**

Specific Learning Goals....

What I want you to know by course end!

The screenshot shows a web browser window with the URL bioboot.github.io/bggn213_f17/goals/. The page content is as follows:

UCSanDiego
BGGN 213
A hands-on introduction to the computer-based analysis of genomic and biomolecular data from the Division of Biological Sciences, UCSD.

Overview
Lectures
Computer Setup
Learning Goals (highlighted with a red box)
Assignments & Grading
Ethics Code
Screen Cast Videos

Specific Learning Goals

Teaching toward the specific learning goals below is expected to occupy 60%-70% of class time. The remaining course content is at the discretion of the instructor with student body input. This includes student selected topics for peer presentation as well one student selected guest lecture from an industry based genomic scientist.

All students who receive a passing grade should be able to:

		Lecture(s):
1	Appreciate and describe in general terms the role of computation in hypothesis-driven discovery processes within the life sciences.	1, 2, 20
2	Be able to query, search, compare and contrast the data contained in major bioinformatics databases and describe how these databases intersect (GenBank, GENE, UniProt, PFAM, OMIM, PDB, UCSC, ENSEMBLE).	2, 12, 13
3	Describe how nucleotide and protein sequence and structure data are represented (FASTA, FASTQ, GenBank, UniProt, PDB).	3, 10
4	Be able to describe how dynamic programming works for pairwise sequence alignment and appreciate the differences	4, 5

Course Structure

Derived from specific learning goals

The screenshot shows a web browser window with the URL bioboot.github.io/bggn213_S18/lectures/. The page is titled "Lectures".

Lectures

All Lectures are Wed/Fri 1:00-4:00 pm in Warren Lecture Hall 2015 (WLH 2015) ([Map](#)). Clicking on the class topics below will take you to corresponding lecture notes, homework assignments, pre-class video screen-casts and required reading material.

#	Date	Topics for Spring 2018
1	Wed, 04/04	Welcome to Bioinformatics Course introduction, Learning goals & expectations, Biology is an information science, History of Bioinformatics, Types of data, Application areas and introduction to upcoming course segments, Hands on with major Bioinformatics databases and key online NCBI and EBI resources
2	Fri, 04/06	Sequence alignment fundamentals, algorithms and applications Homology, Sequence similarity, Local and global alignment, classic Needleman-Wunsch, Smith-Waterman and BLAST heuristic approaches, Hands on with dot plots, Needleman-Wunsch and BLAST algorithms highlighting their utility and limitations

1: Welcome to Foundations of Bioinformatics

Topics:
Course introduction, Learning goals & expectations, Biology is an information science, History of Bioinformatics, Types of data, Application areas and introduction to upcoming course segments, Student 30-second introductions, Student computer setup.

Goals:

- Understand course scope, expectations, logistics and [ethics code](#).
- Understand the increasing necessity for computation in modern life sciences research.
- Get introduced to how bioinformatics is practiced.
- Complete the [pre-course questionnaire](#).
- Setup your laptop computer for this course.

Material:

- [Pre class screen cast](#),
- Lecture Slides: Large PDF, [Small PDF](#), (To be updated!)
- [Handout: Class Syllabus](#)
- Computer [Setup Instructions](#).

Homework

Lectures
Computer Setup
Learning Goals
Assignments & Grading

9: Unsupervised learning mini-project

Topics: Longer hands-on session with unsupervised learning analysis of cancer cells, Practical considerations and best practices for the analysis and visualization of high dimensional datasets.

Goals:

- Be able to import data and prepare for unsupervised learning analysis.
- Be able to apply and test combinations of PCA, k-means and hierarchical clustering to high dimensional datasets and critically review results.

Material:

- Lecture Slides: **To Update** [Large PDF](#) [Small PDF](#)
- Lab: [Hands-on Worksheet](#)
- Data file: [WisconsinCancer.csv](#) [new_samples.csv](#)
- Bio3D PCA App: <http://bio3d.ucsd.edu/pca-app/>
- Feedback: [Muddy-Point-Assesment](#)

Projects

Week long **mini-projects** (x2),
and 1 five week main project

The image shows a web browser window with two tabs open. The left tab is the course homepage for BGGN 213 at UC San Diego, featuring a blue background with the university's name and the course title. The right tab is a specific lecture page titled "18: Cancer genomics".

18: Cancer genomics

Topics: Cancer genomics resources and bioinformatics tools for investigating the molecular basis of cancer. Large scale cancer sequencing projects; NCI Genomic Data Commons; What has been learned from genome sequencing of cancer? **Immunoinformatics, immunotherapy and cancer;** Using genomics and bioinformatics to harness a patient's own immune system to fight cancer. Implications for the development of personalized medicine.

N.B. Find a gene assignment due before next class!

Material:

- Lecture Slides: [Large PDF](#), [Small PDF](#)
- Lab: **T0 UPDATE** [Hands-on Worksheet Part 1.](#)
- Lab: **T0 UPDATE** [Hands-on Worksheet Part 2.](#)
- Data files:
 - [lecture18_sequences.fa](#)

Projects

Week long mini-projects (x2),
and 1 five week **main project**

The [find-a-gene project](#) is a required assignment for BIMM-143. The objective with this assignment is for you to demonstrate your grasp of database searching, sequence analysis, structure analysis and the R environment that we have covered to date in class.

You may wish to consult the scoring rubric at the end of the above linked project description and the [example report](#) for format and content guidance.

Your responses to questions Q1-Q4 are due at the beginning of class **Fri Feb 22nd (02/22/19)**.

The complete assignment, including responses to all questions, is due at the beginning of class **Wed March 13th (03/13/19)**.

Late responses will not be accepted under any circumstances.

Why Projects?

- Projects allow you to practice your new Bioinformatics skills in a less guided environment.
- In Projects, we provide datasets and ask you questions about them; just like a research project.
- Projects help build a personal portfolio and showcase your new skills, as well as help put what we have learned into practice.

BGGN-213 Learning Goals....

Advanced UNIX and R based learning goals

The screenshot shows a web browser window with the URL bioboot.github.io/bggn213_f17/goals/. The page is titled "BGGN 213". The sidebar on the left includes links for Overview, Lectures, Computer Setup, Learning Goals (which is highlighted with a red box), Assignments & Grading, Ethics Code, and Screen Cast Videos. The main content area displays 12 learning goals, each with a number, a description, and a list of associated numbers. Goals 6, 7, 8, and 9 are grouped together and highlighted with a green border.

Goal	Description	Associated Numbers
5	Calculate the alignment score between two nucleotide or protein sequences using a provided scoring matrix and be able to perform BLAST, PSI-BLAST, HMMER and protein structure based database searches and interpret the results in terms of the biological significance of an e-value.	5, 10
6	Use UNIX command-line tools for file system navigation and text file manipulation.	6, 7, 10, 11, 24, 15
7	Use existing programs at the UNIX command line to analyze bioinformatics data.	7, 10, 11, 13, 14, 15, 16
8	Use R to read and parse comma-separated (.csv) formatted files ready for subsequent analysis.	8, 9, 10, 11, 13, 15, 16
9	Perform elementary statistical analysis on biomolecular and "omics" datasets with R and produce informative graphical displays and data summaries.	9, 10, 11, 13, 15, 16
10	View and interpret the structural models in the PDB.	10, 11
11	Explain the outputs from structure prediction algorithms and small molecule docking approaches.	11
12	Appreciate and describe in general terms the rapid advances in sequencing technologies and the new areas of investigation that have arisen from these advances.	13, 14, 15

BGGN-213 Learning Goals....

Delve deeper into “real-world” bioinformatics

13	sequenced and the bioinformatics processing and analysis required for their interpretation.	13
14	For a genomic region of interest (e.g. the neighborhood of a particular gene), use a genome browser to view nearby genes, transcription factor binding regions, epigenetic information, etc.	14
15	Given an RNA-Seq data file, find the set of significantly differentially expressed genes and use online tools to interpret gene lists and annotate potential gene functions.	15, 16
16	Perform a GO analysis to identify the pathways relevant to a set of genes (e.g. identified by transcriptomic study or a proteomic experiment).	16
17	Use the KEGG pathway database to look up interaction pathways.	17
18	Use graph theory to represent biological data networks.	17, 18
19	Understand the challenges in integrating and interpreting large heterogenous high throughput data sets into their functional context.	19
20	Have an appreciation for the social impacts and ethical implications of how genomic sequence information is used in our society	20

These support a major learning objective

At the end of this course students will:

- Understand the increasing necessity for computation in modern life sciences research.
- Be able to use and evaluate online bioinformatics resources and analysis tools to solve problems in the biological sciences.
- Be able to use UNIX and the R environment to analyze bioinformatics data at scale.
- Be familiar with the research objectives of the bioinformatics related sub-disciplines of Genome informatics, Transcriptomics and Structural informatics.

< https://www.datacamp.com/ >

The screenshot shows the RStudio IDE interface running within a web browser window. The browser title bar reads "What is an IDE anyway? | R". The URL in the address bar is "https://campus.datacamp.com/courses/working-with-the-rstudio-ide-part-1/orientation?ex=2". The DataCamp logo is visible in the top left of the IDE.

The main content area displays a course exercise titled "What is an IDE anyway?". A message says "Exercise Completed" with a blue button labeled "50xp" (experience points). Below this, a message says "Nice job! Move onto the next video to start learning more about the RStudio IDE!".

A red circle highlights the "50xp" button. Another red circle highlights the yellow "Continue" button in a sidebar labeled "PRESS ENTER TO CONTINUE".

In the center, the R console output shows:

```
R version 3.3.1 (2016-06-21) -- "Bug in Your Hair"  
Copyright (C) 2016 The R Foundation for Statistical Computing  
Platform: x86_64-pc-linux-gnu (64-bit)  
  
R is free software and comes with ABSOLUTELY NO WARRANTY.  
You are welcome to redistribute it under certain conditions.  
Type 'license()' or 'licence()' for distribution details.  
  
Natural language support but running in an English locale  
  
R is a collaborative project with many contributors.  
Type 'contributors()' for more information and  
'citation()' on how to cite R or R packages in publications.  
  
Type 'demo()' for some demos, 'help()' for on-line help,  
or  
'help.start()' for an HTML browser interface to help.  
Type 'q()' to quit R.
```

The RStudio interface includes the following panels:

- Console:** Shows the R startup message and the command prompt (>).
- Environment:** Shows "Environment is empty".
- Files:** Shows a list of files including "Home".

A sidebar on the left contains a "Become a power user!" section with keyboard shortcuts for "Submit Answer" (Ctrl + Shift + Enter) and "See all keyboard shortcuts". It also has a "Take Hint (-15xp)" button.

< https://www.datacamp.com/ >

Homework assignments will be via DataCamp

The screenshot shows a DataCamp exercise interface. On the left, there's a sidebar with a 'DataCamp' logo, a 'Course Outline' button, and a '5+' notifications icon. Below that is a 'Exercise' tab, followed by a section titled 'PCA analysis'. The main area has tabs for 'script.R' and 'RDocumentation'. The 'script.R' tab contains the following code:

```
1 # Transform the normalized counts
2 vsd_smoc2 <- vst(dds_smoc2, blind = TRUE)
3
4 # Plot the PCA of PC1 and PC2
5 ---(_____, intgroup=____)
```

Below the code editor are three buttons: a blue 'Run Code' button, a green 'Submit Answer' button, and a small circular icon with a '5'.

At the bottom, there are tabs for 'R Console' and 'Slides'. The 'R Console' tab shows the following session history:

```
> ?plotPCA
> plotPCA(vsd_smoc2)
Error: object 'vsd_smoc2' not found
> vsd_smoc2 <- vst(dds_smoc2, blind = TRUE)
+
> plotPCA(vsd_smoc2)
>
```

On the far left, under the exercise title, there's a 'Instructions 1/2 50 XP' section with two numbered steps. Step 1 is 'Run the code to transform the normalized counts.' Step 2 is 'Perform PCA by plotting PC1 vs PC2 using the DESeq2 `plotPCA()` function on the DESeq2 transformed counts object, `vsd_smoc2` and specify the `intgroup` argument as the factor to color the plot.'

At the bottom left, there's a 'Take Hint (-15 XP)' button.

< https://www.datacamp.com/ >

The screenshot shows a web browser window for DataCamp. The URL in the address bar is <https://www.datacamp.com/groups-foundations-of-bioinformatics-bggn-213/details>. The DataCamp logo is in the top left, and the main navigation menu includes 'Learn', 'Groups' (which is circled in red), and 'About'. A user profile on the right shows 1,550 XP. The main content area displays the title 'Foundations of Bioinformatics (BGGN-213)'. Below it is a leaderboards section with tabs for 'Leaderboard' (selected) and 'My Assignments'. Underneath are filters for '30 Days', '90 Days', and 'Last Year'. A table lists the top 8 members based on XP, showing their rank, profile picture, name, XP, Courses completed, and Chapters completed.

Member	XP	Courses	Chapters
1 Angela Nicholson	22450	4	20

Introduction to Bioinformatics

Introducing the *what, why and how* of bioinformatics?

Computer Setup

Ensuring your laptop is all set for future sections of this course.

“What is Bioinformatics?”

“Bioinformatics is the application of computers to the collection, archiving, organization, and analysis of biological data.”

... A hybrid of biology and computer science

“Bioinformatics is the application of computers to the collection, archiving, organization, and analysis of biological data.”

Bioinformatics is computer aided biology!

“Bioinformatics is the application of computers to the collection, archiving, organization, and analysis of biological data.”

Bioinformatics is computer aided biology!

Goal: Data to Knowledge

There are many useful definitions...

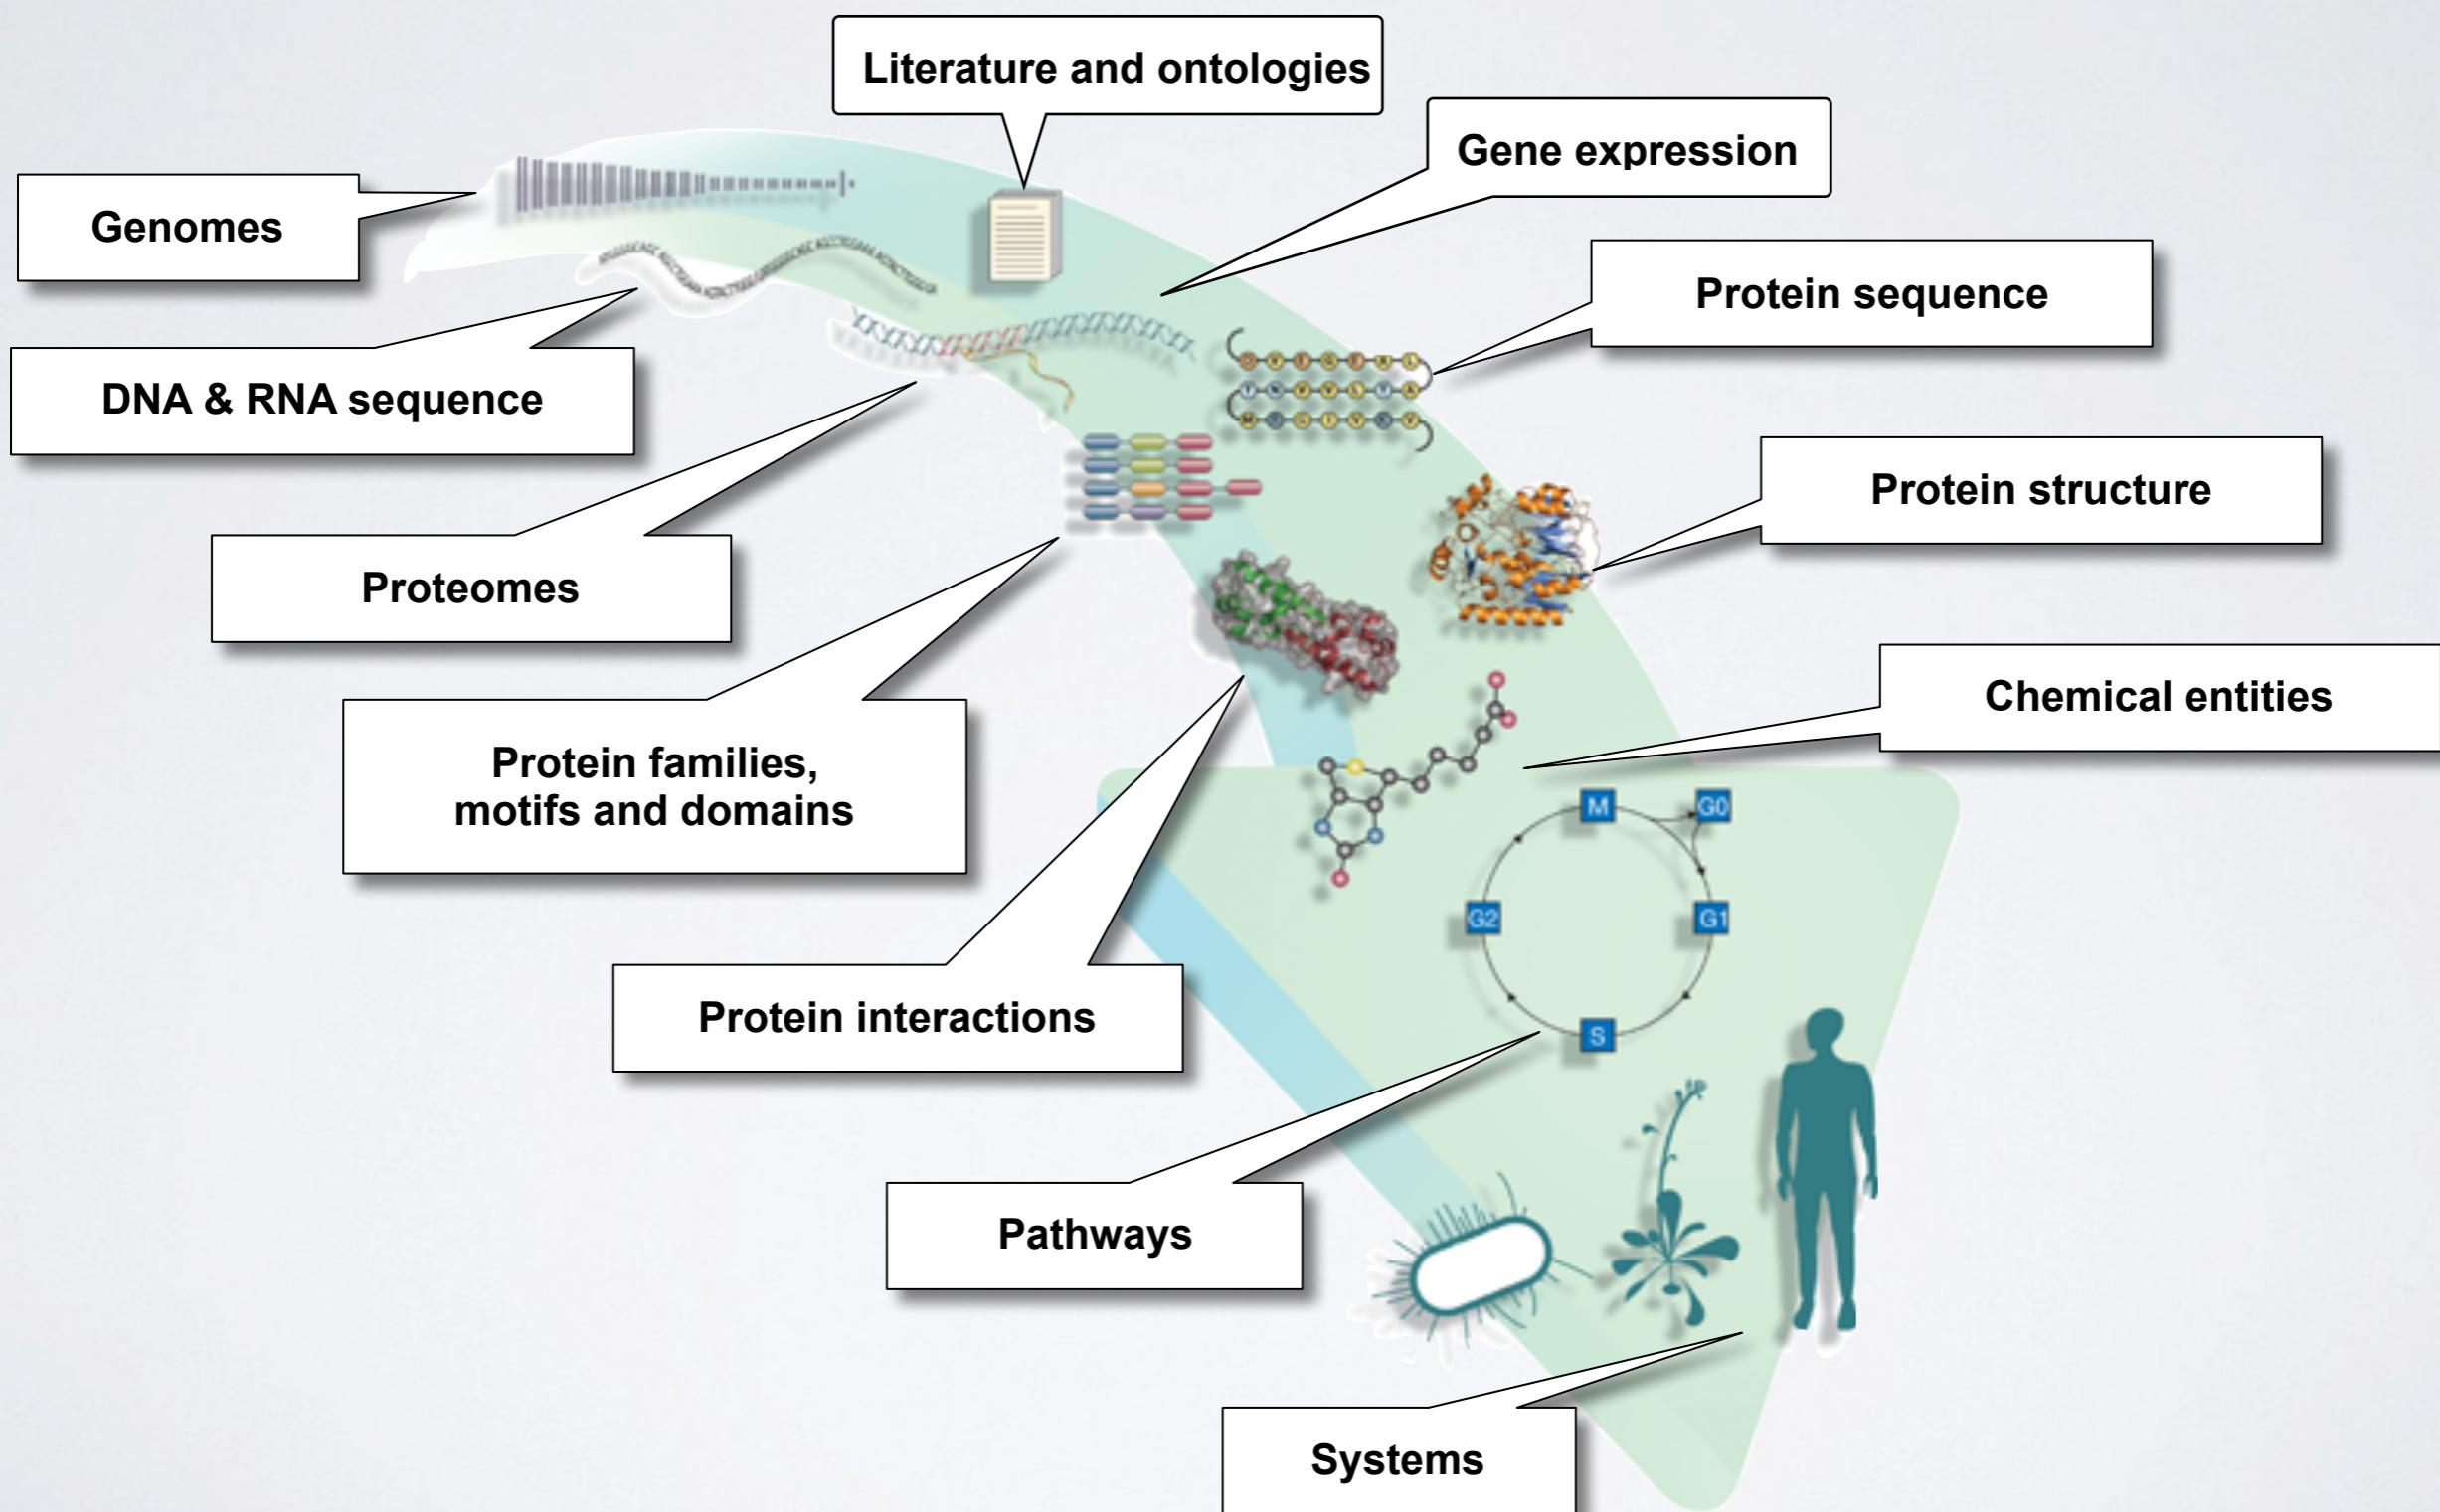

- "Computer based **management** and **analysis** of biological and biomedical data with useful applications in many disciplines, particularly **genomics**, **proteomics**, **metabolomics**, and related fields."
(BGGN-213)
- "Bioinformatics is conceptualizing biology in terms of **macromolecules** and then applying "**informatics**" techniques (derived from disciplines such as applied maths, computer science, and statistics) to **understand** and **organize** the information associated with these molecules, on a **large-scale**."
(Luscombe et al. 2001)
- "Bioinformatics is research, development, or application of **computational approaches** for expanding the use of biological, medical, behavioral or health data, including those to acquire, **store**, **organize** and **analyze** such data ...<cut>..."
(National Institutes of Health: <http://tinyurl.com/l3gxr6b>)

There are many useful definitions...

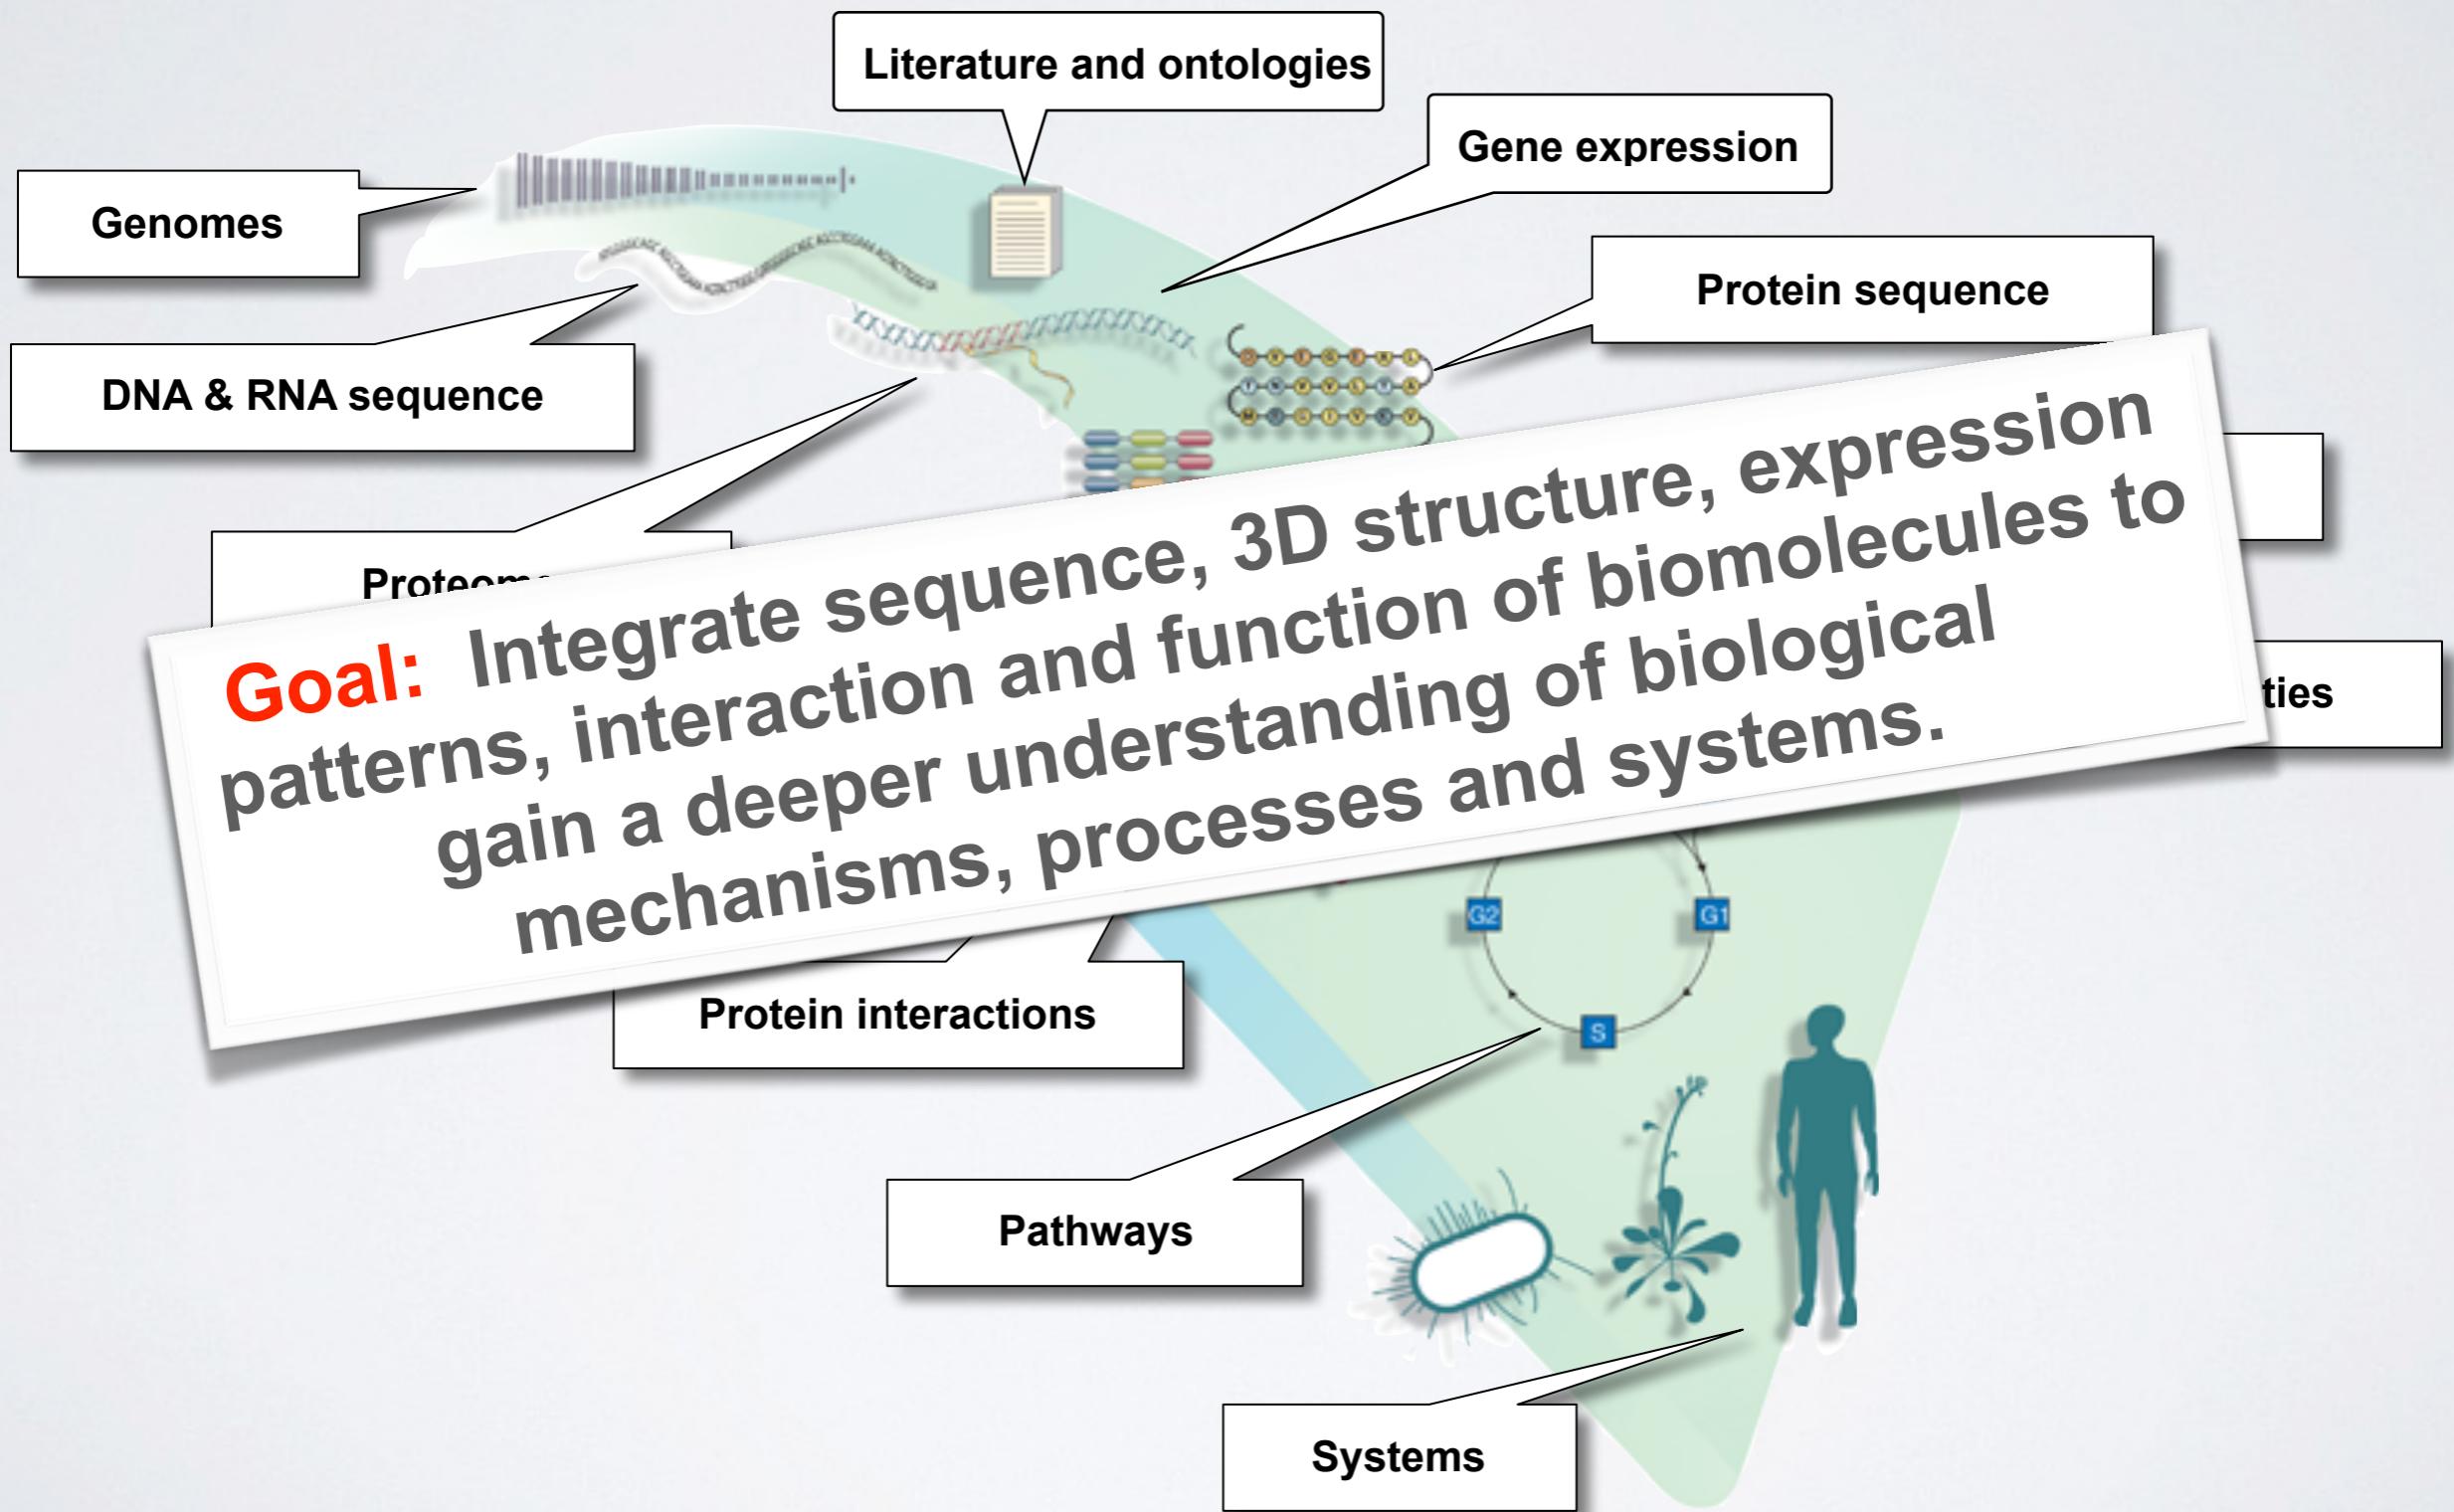

- "Computer based **management** and **analysis** of biological and biomedical data with useful applications in many disciplines, particularly **genomics**, **proteomics**, **metabolomics**, and related fields."
(BGGN-213)
- "Bioinformatics is conceptualizing biology at the level of macromolecules and then applying "informatics" techniques (derived from disciplines such as applied mathematics, computer science, and statistics) to **understand**, **acquire**, **store**, **organize** the information associated with these molecules at the **bio-scale**."
(Luscombe et al., 2001)
- "Bioinformatics is research, development, or application of **computational approaches** for expanding the use of biological, medical, behavioral or health data, including those to acquire, store, organize and **analyze** such data ...<cut>..."
(National Institutes of Health: <http://tinyurl.com/l3gxr6b>)

Key Point: Bioinformatics is Computer Aided Biology

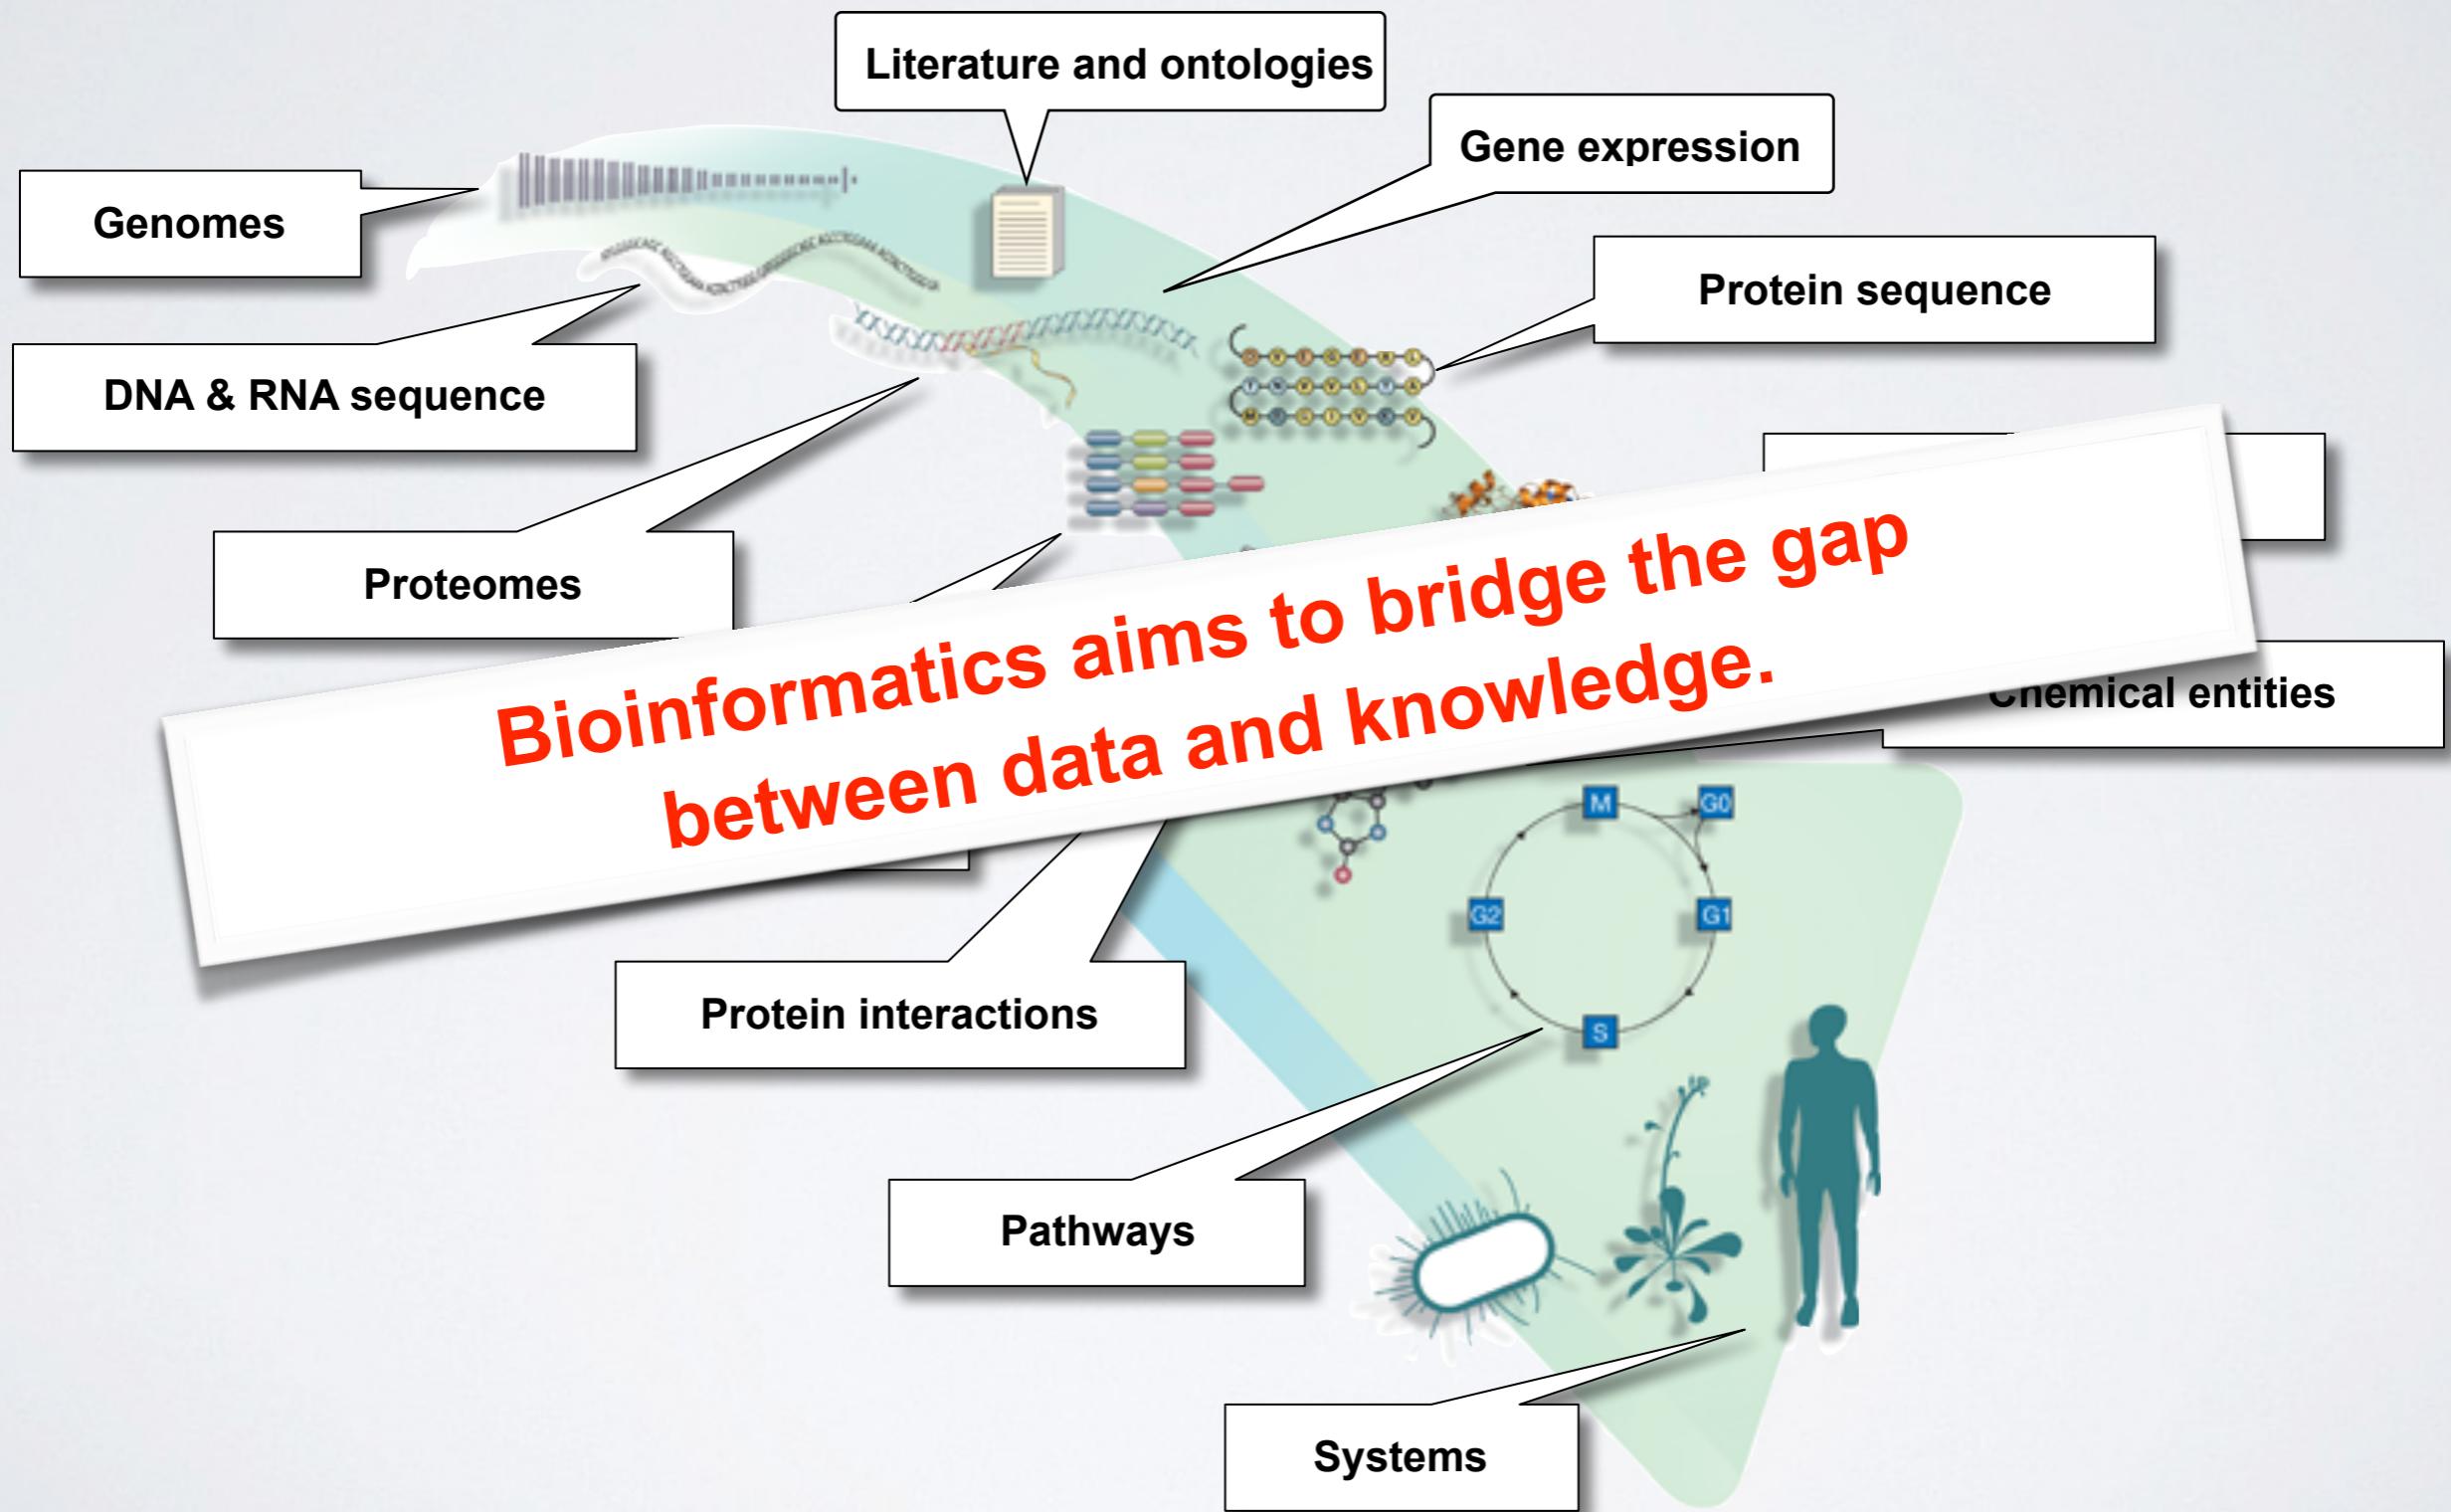

Major types of Bioinformatics Data

Major types of Bioinformatics Data

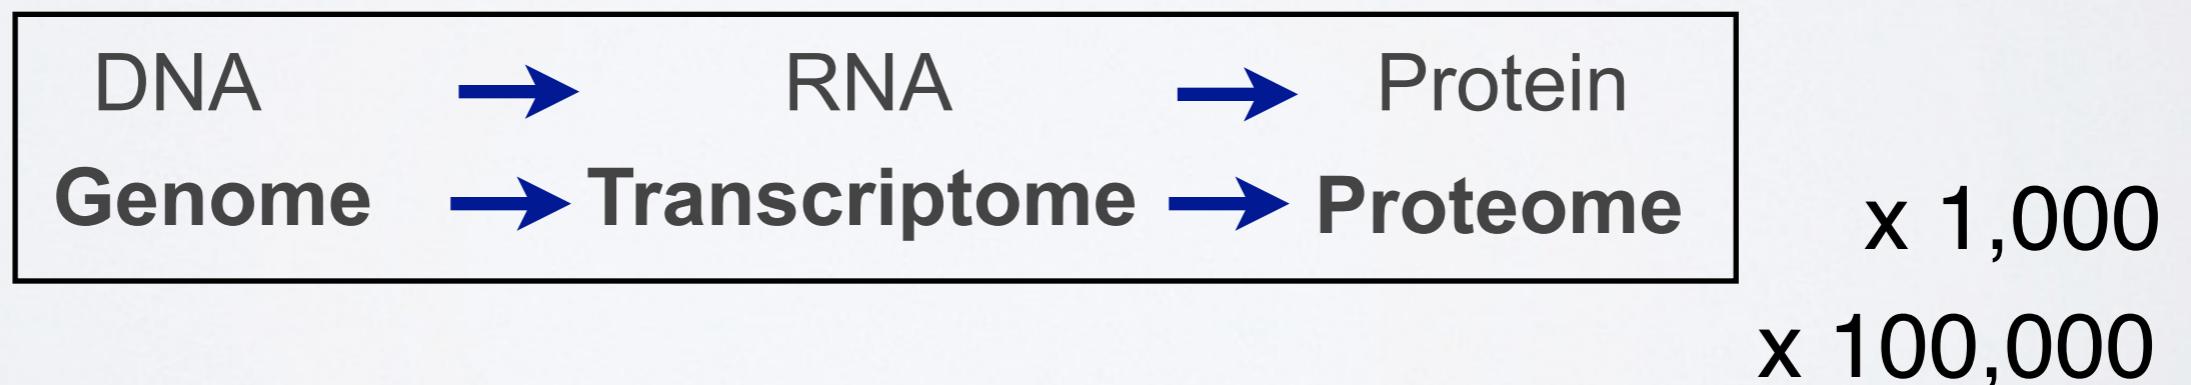

Major types of Bioinformatics Data

How do we do Bioinformatics?

- A “*bioinformatics approach*” involves the application of **computer algorithms**, **computer models** and **computer databases** with the broad goal of understanding the action of both individual genes, transcripts, proteins and large collections of these entities.

How do we *actually* do Bioinformatics?

Pre-packaged tools and databases

- Many online
- Most are free to use
- Time consuming methods require downloading...

Advanced tool application & development

- Mostly on a UNIX environment
- Knowledge of programing languages frequently required
(e.g. R, Python, Perl, C, Java, Fortran)
- May require specialized high performance computing...

How do we *actually* do Bioinformatics?

Pre-packaged tools and databases

- Many online
- Most are free to use

Advanced tool application & development

- Mostly on a UNIX environment
- Knowledge of programing languages frequently required
(e.g. R, Python, Perl, C, Java, Fortran)
- May require specialized high performance computing...

HOW COMPUTERS HAVE CHANGED

DATE	COST	SPEED	MEMORY	SIZE
1967	\$40M	0.1 MHz	1 MB	WALL
2013	\$4,000	1 GHz	10 GB	LAPTOP
CHANGE	10,000	10,000	10,000	10,000

If cars were like computers then a new Volvo would cost \$3, would have a top speed of 1,000,000 Km/hr, would carry 50,000 adults and would park in a shadow.

NSF Extreme Science and Engineering Discovery Environment (XSEDE)

The screenshot shows a web browser window with the URL www.xsede.org/community-engagement/educator-pro. The page features a dark blue header with the XSEDE logo and navigation links for Home, Gmail, Gcal, Bitbucket, GitHub, News, Disqus, About, For Users, Ecosystem, Community Engagement (which is currently selected), News, XUP, and a search icon. The main content area has a background image of a star-filled galaxy. A large white title 'Curriculum and Educator Programs' is centered above a black sidebar. The sidebar contains the text 'XSEDE pursues innovation and collaboration in computational science education.' and a section titled 'Campus Visits' with descriptive text. To the right of the sidebar is a 'Key Points' section with a bulleted list and a 'Related Links' section with several blue hyperlinks.

Curriculum and Educator Programs

XSEDE pursues innovation and collaboration in computational science education.

Campus Visits

XSEDE campus visits emphasize the need for computational science education and offer guidance concerning course content.

Campus visits bring together faculty, students, and administrators to discuss the importance of having a workforce that is ready to use modeling and simulation, advanced data analysis, and visualization to explore problems in science and engineering, in both academic and non-academic settings.

A typical campus visit consists of a general presentation affirming the essentiality of computational science education and suggesting approaches to inserting the appropriate content into the curriculum. Discussions are held with faculty and administrators about the current curriculum. Some visits are also combined with a half-day workshop on

Key Points

- XSEDE sponsors full-semester online courses
- Collaborations with faculty at participating institutions
- Campus visits offer guidance concerning course content

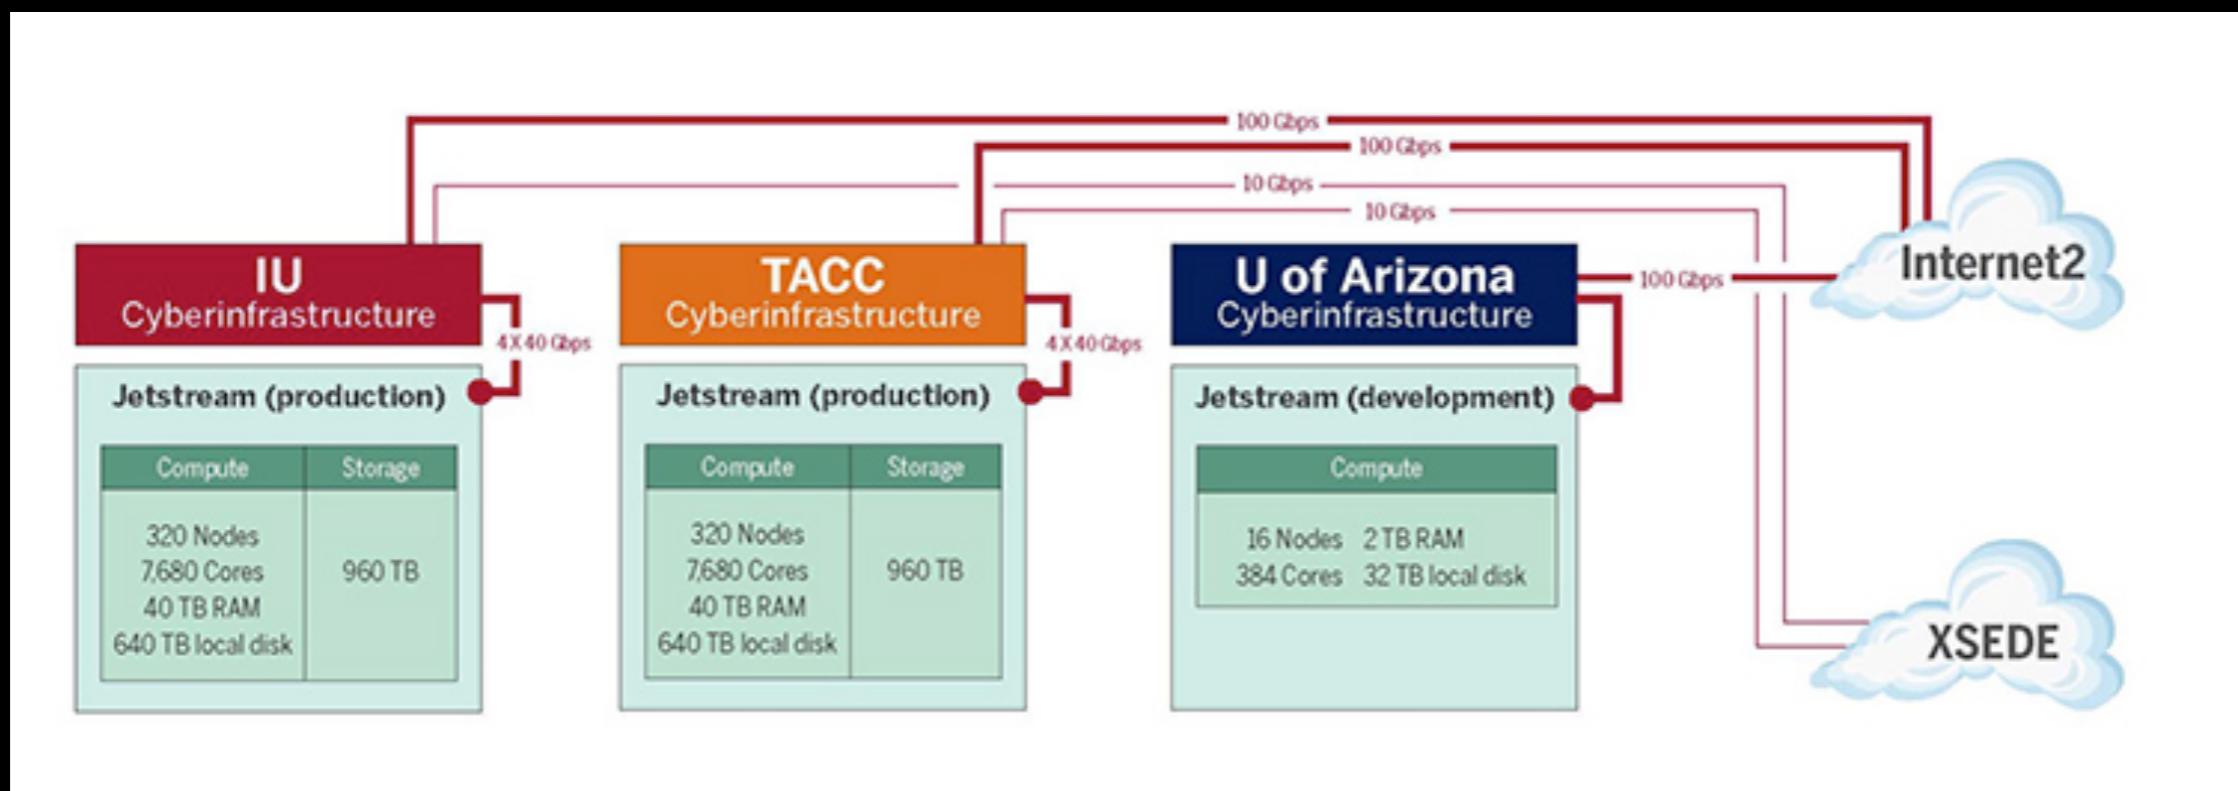

XSEDE campus visits emphasize the need for computational science education and offer guidance concerning course content

What is *Jetstream*?

- A new cloud computing environment based at Indiana University and the Texas Advanced Computing Center (TACC) providing on-demand access to interactive computing and data analysis resources.

Jetstream tutorials

Developed *user friendly* labs for Jetstream basics

The screenshot shows a web browser window with two main pages visible.

Left Side (Course Navigation):

- UC San Diego logo
- BGGN 213
- A hands-on introduction to the computer-based analysis of genomic and biomolecular data from the Division of Biological Sciences, UCSD
- Overview
- Lectures (highlighted with a red border)
- Computer Setup
- Learning Goals
- Assignments & Grading
- Ethics Code
- Screen Cast Videos

Right Side (Tutorial Content):

Starting a Jetstream Computer Instance!

Here we describe the process of starting up and managing a [Jetstream](#) service virtual machine instance.

Note: Jetstream is a cloud-based on-demand virtual machine system funded by the National Science Foundation. It will provide us with computers (what we call "virtual machine instances") that look and feel just like a regular Linux workstation but with thousands of times the computing power!

What we're going to do here is walk through starting up and running computer (an "instance") on the Jetstream service.

Below we walk through the process of starting up and accessing one of these instances. To begin with, just think of it like requesting and logging-in to a brand new remote computer. We have provided screenshots of the whole process that you can click on to see a larger version. The important areas to fill in are circled in red.

Note Some of the details may vary – for example, if you have your own XSEDE account, you may want to log in with that – and the name of the operating system or “image” may also vary from “Ubuntu 16.04” depending

Jetstream tutorials

Developed *user friendly* labs for Jetstream basics

The image shows a web browser window with two tabs open. The top tab is titled "bioboot.github.io/bggn213_f17/jetstream/boot/" and displays the UC San Diego BGGN 213 course website. The bottom tab is also titled "bioboot.github.io/bggn213_f17/jetstream/boot/" and displays the Jetstream application login page. Both tabs have a similar header with links to Home, Gmail, Gcal, Bitbucket, GitHub, News, and Disqus.

Request to log in to the Jetstream Portal

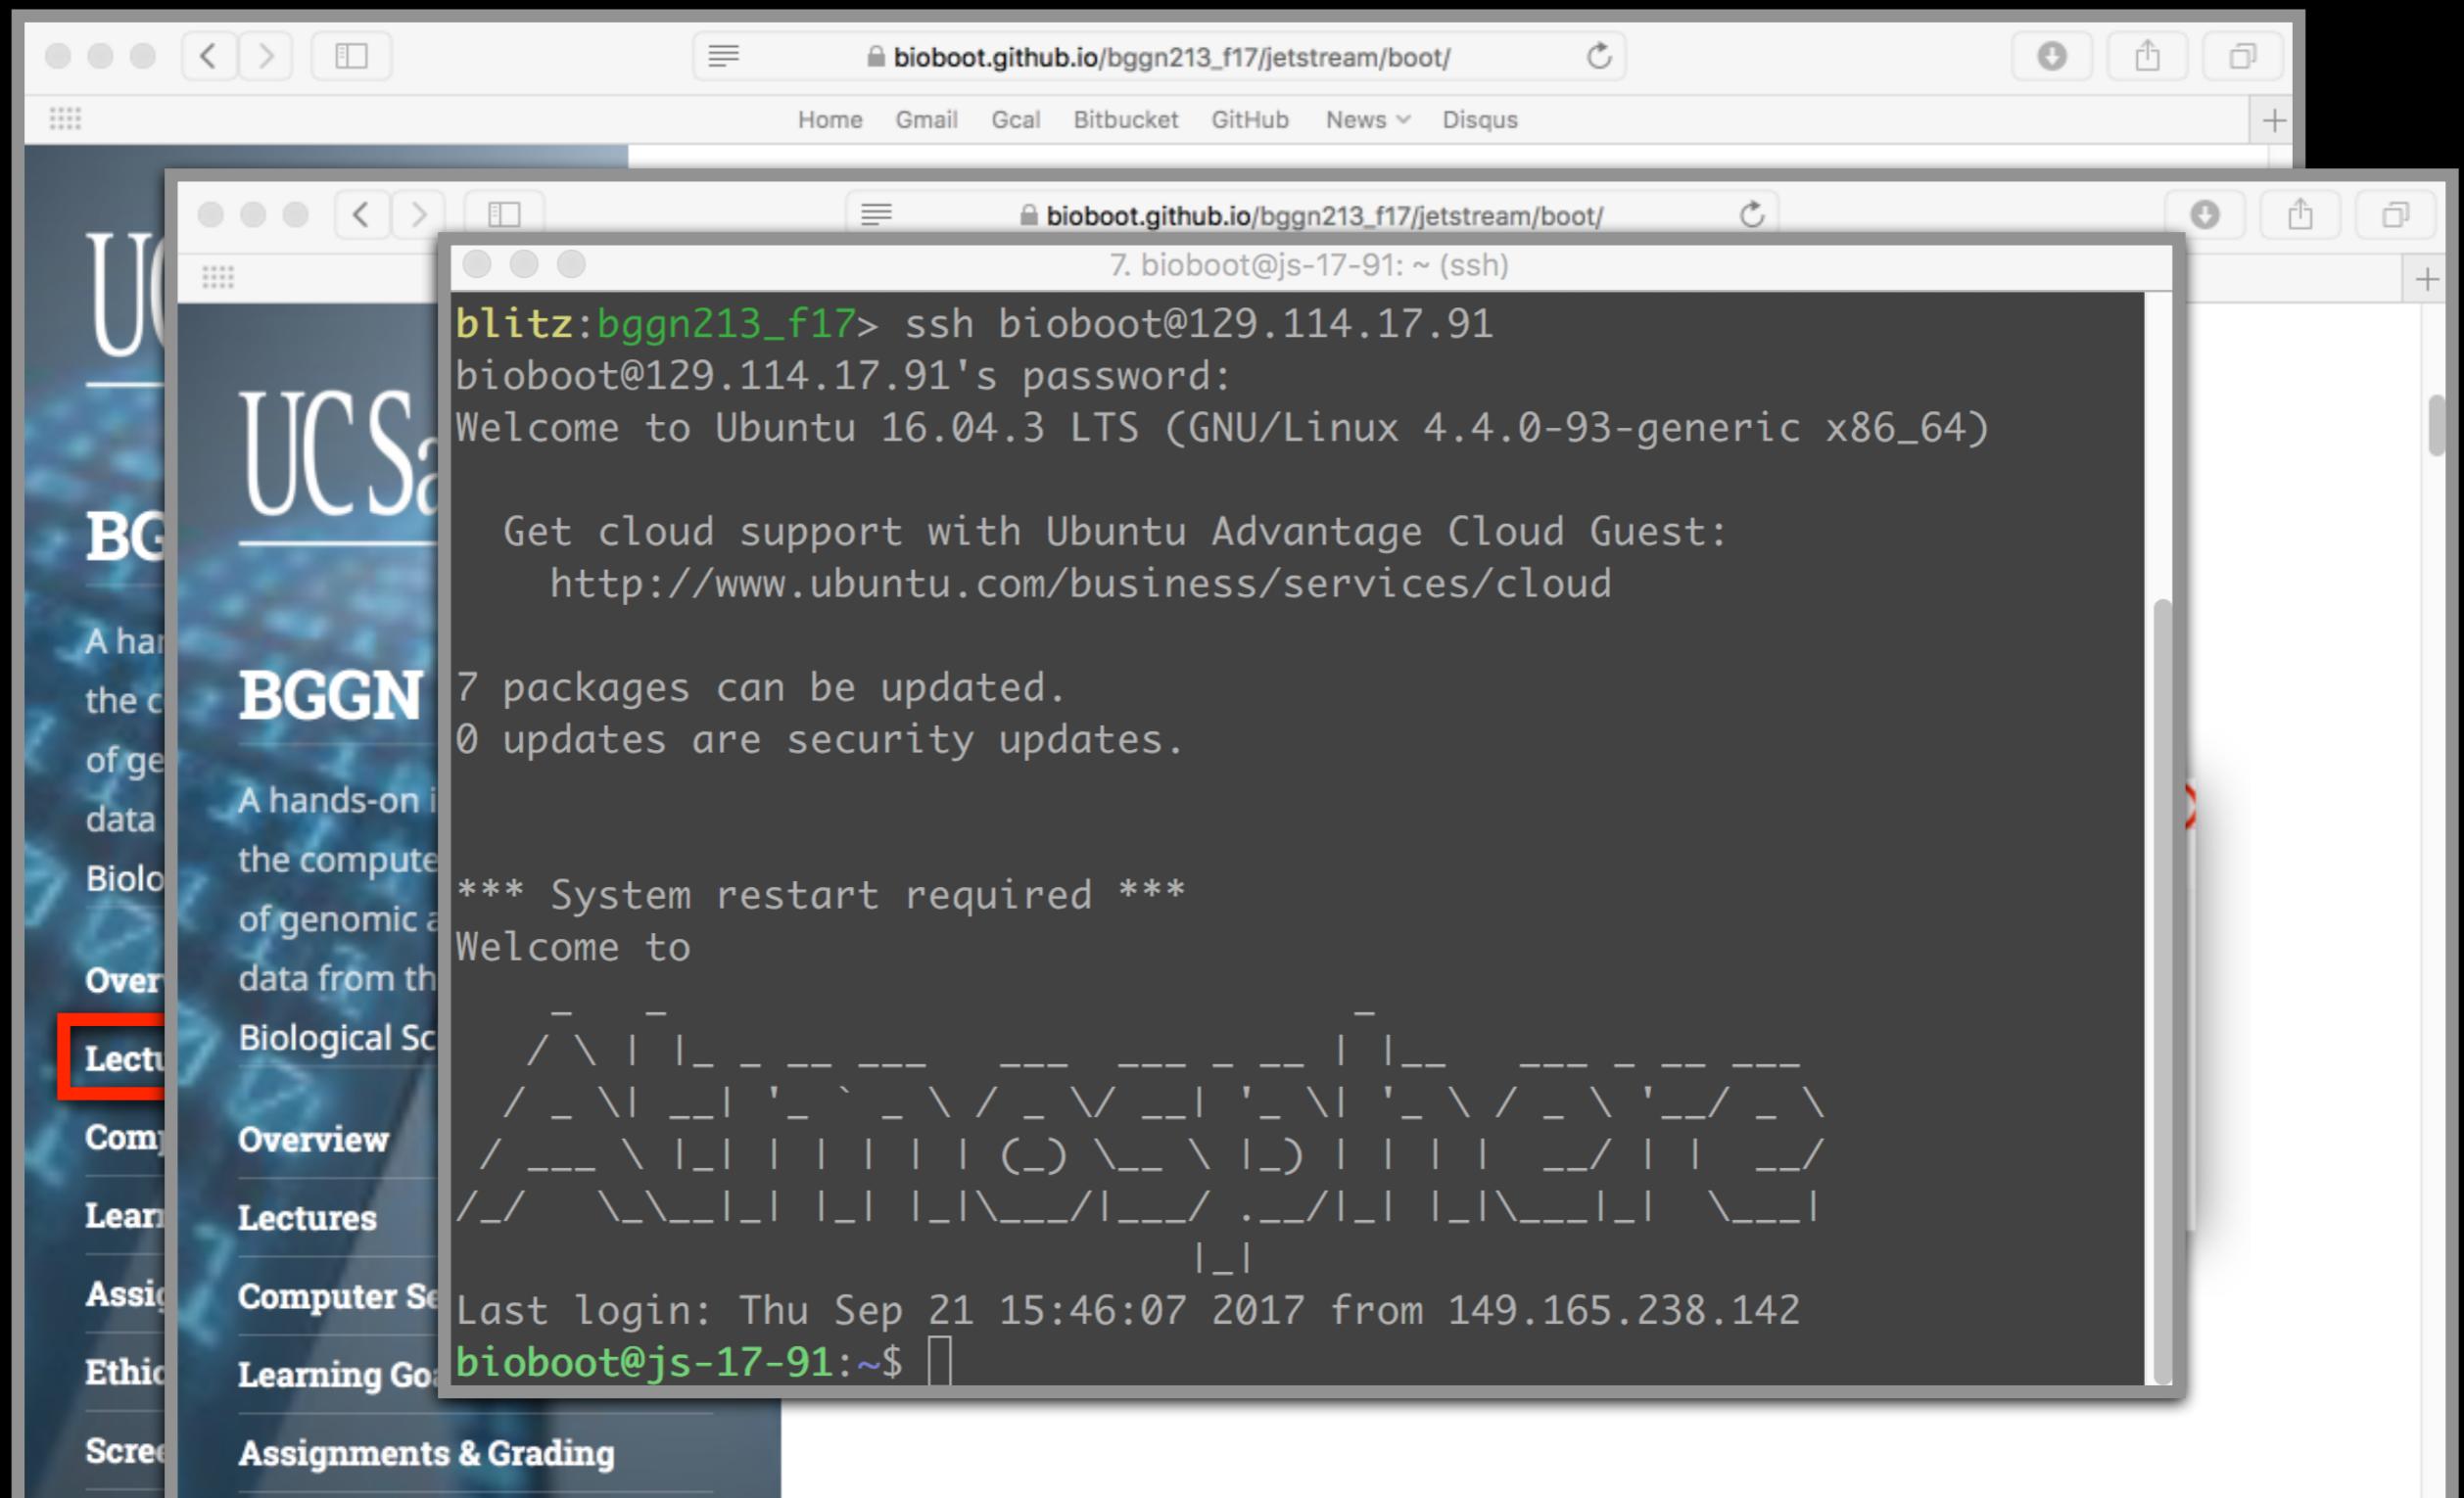

First, go to the Jetstream application at:
<https://use.jetstream-cloud.org/application>.

Now click the **Login** link in the upper right.

The Jetstream application login page features a red "Login" button in the top right corner, which is circled in red. The page includes a search bar, a "Image Search" section showing 93 images, and a "Featured Images" section displaying two thumbnail cards: "R with Intel compilers (CentOS 7)" and "R with GCC (CentOS 7)".

Jetstream tutorials

Developed *user friendly* labs for Jetstream basics

Skepticism & Bioinformatics

We have to approach computational results the same way we do wet-lab results:

- Do they make sense?
- Is it what we expected?
- Do we have adequate controls, and how did they come out?
- Modeling is modeling, but biology is different...

What does this model actually contribute?

- Avoid the miss-use of ‘black boxes’

Skepticism & Bioinformatics

Gunnar von Heijne in “*Sequence Analysis in Molecular Biology; Treasure Trove or Trivial Pursuit*” states:

→ “Think about what you’re doing; use your knowledge of the molecular system involved to guide both your interpretation of results and your direction of inquiry; use as much information as possible; and do not blindly accept everything the computer offers you”.

Key-Point: Avoid the miss-use of ‘black boxes’!

Common problems with Bioinformatics

Confusing multitude of tools available

- ▶ Each with many options and settable parameters

Most tools and databases are written by and for nerds

- ▶ Same is true of documentation - if any exists!

Most are developed independently

Notable exceptions are found at the:

- **EBI** (European Bioinformatics Institute) and
- **NCBI** (National Center for Biotechnology Information)

General Parameters

Max target sequences	500

Key Online Bioinformatics Resources: NCBI & EBI

The NCBI and EBI are invaluable, publicly available resources for biomedical research

The screenshot shows the homepage of the National Center for Biotechnology Information (NCBI). The top navigation bar includes links for 'Resources' (with a dropdown menu), 'How To', 'Sign in to NCBI', and a search bar. The main content area features a 'Welcome to NCBI' section, a 'Get Started' section with links to tools, downloads, and how-to guides, and a '3D Structures' section showing a molecular model. On the right, there's a sidebar titled 'Popular Resources' listing links to PubMed, Bookshelf, PubMed Central, and other databases. A 'NCBI Announcements' section highlights the new version of the Genome Workbench.

<http://www.ncbi.nlm.nih.gov>

The screenshot shows the homepage of the European Bioinformatics Institute (EMBL-EBI). The top navigation bar includes links for 'Services', 'Research', 'Training', and 'About us'. The main content area features a search bar for finding genes, proteins, or chemicals, and sections for 'Services', 'Research', 'Training', 'Industry', 'European Coordination', and 'EMBL ALUMNI'. A 'News from EMBL-EBI' section displays images of scientific work. On the right, there's a sidebar titled 'Popular' with links to 'Services', 'Research', 'Training', and 'News', and a 'Visit EMBL.org' section with the EMBL logo and a '40 years' anniversary graphic. Below this are sections for 'Upcoming events' (Plant and Animal Genome conference) and 'SME Forum 2016'.

BGGN-213: FOUNDATIONS OF BIOINFORMATICS (Lecture 1)

Bioinformatics Databases and Key Online Resources

https://bioboot.github.io/bggn213_S18/lectures/#1

Dr. Barry Grant

Overview: The purpose of this lab session is to introduce a range of bioinformatics databases and associated services available on the Web whilst investigating the molecular basis of a common human disease.

Sections 1 and 2 deal with querying and searching GenBank, GENE and OMIM databases at NCBI. Sections 3 and 4 provide exposure to EBI resources for comparing proteins and visualizing protein structures. Finally, section 5 provides an opportunity to explore these and other databases further with additional examples.

Side-note: The Web is a dynamic environment, where information is constantly added and removed. Servers "go down", links change without warning, etc. This can lead to "broken" links and results not being returned from services. Don't give up - give it a second go and try a search engine using terms related to the page you are trying to access.

Section 1

The following transcript was found to be abundant in a human patient's blood sample.

```
>example1
ATGGTGCATCTGACTCCTGTGGAGAAGTCTGCCGTTACTGCCCTGTGGGCAAGGTGAACGTGGATGAAG
TTGGTGGTGAGGCCCTGGCAGGCTGCTGGTGTACCCCTGGACCCAGAGGTTCTTGAGTCCTTGG
GGATCTGTCCACTCCTGATGCAGTTATGGCAACCTAAGGTGAAGGCTCATGGCAAGAAAGTGCTCGGT
GCCTTAGTGTAGGCCTGGCTCACCTGGACAACCTCAAGGGCACCTTGCACACTGAGTGAGCTGCACT
GTGACAAGCTGCACGTGGATCCTGAGAACCTCAGGCTCCTGGCAACGTGCTGGTCTGTGTGCTGGCCA
TCACCTTGGCAAAGAACATTCCCCACCAGTGCAGGCTGCCTATCAGAAAGTGGTGGCTGGTGTGGCTAAT
GCCCTGGCCCACAAGTATCACTAAGCTCGCTTCTTGCTGTCCAATTT
```

The only information you are given is the above sequence so you must begin your investigation with a sequence search - for this example we will use NCBI's **BLAST** service at: <http://blast.ncbi.nlm.nih.gov/>

Note that there are several different "basic BLAST" programs available at NCBI (including nucleotide BLAST, protein BLAST, and BLASTx).

YOUR TURN!

- There are five major hands-on sections including:
 1. BLAST, GenBank and OMIM @ **NCBI** [~35 mins]
 2. GENE database @ **NCBI** [~15 mins]
— BREAK —
 3. UniProt & Muscle @ **EBI** [~25 mins]
 4. PFAM, PDB & NGL [~30 mins]
— BREAK —
 5. Extension exercises [~30 mins]

- ▶ Please do answer the last review question (**Q19**).
▶ We encourage discussion and exploration!

YOUR TURN!

- There are five major hands-on sections including:

1. BLAST, GenBank and OMIM @ **NCBI**

End times:

[2:35 pm]

2. GENE database @ **NCBI**

[2:55 pm]

— BREAK —

— 3:10 pm —

3. UniProt & Muscle @ **EBI**

[3:30 pm]

4. PFAM, PDB & NGL

[4:00 pm]

— BREAK —

— 4:10 pm —

5. Extension exercises

[4:40 pm]

- ▶ Please do answer the last review question (**Q19**).
- ▶ We encourage discussion and exploration!

SUMMARY

- Bioinformatics is computer aided biology.
- Bioinformatics deals with the collection, archiving, organization, and interpretation of a wide range of biological data.
- The NCBI and EBI are major online bioinformatics service providers.
- Introduced Gene, UniProt, PDB databases as well as a number of ‘boutique’ databases including PFAM and OMIM.

HOMEWORK

<http://thegrantlab.org/bggn213/>

- Complete the initial course questionnaire:
- Check out the “background reading” material online:
- Complete the lecture 1 homework questions:
